EGAN'S FIRST GOLF.

H. Chandler Egan had a somewhat unusual introduction to 4 * golf. He and his brother laid . out a small three hole course in 4 . the pasture back of his father's \$. house; then they invited their . · cousin over to show them how · ◆ to play the game. Teeing up a ◆ . ball on the first, he lit it straight . & down to the broomstick which & served as a flagpole. The ball & · bounced along the uneven green · . and finally disappeared in the . ♠ hole. Turning to his astonished ◆ ◆ that is the way you do it." ◆ Chandler Egan tried, but didn't 4 💠 quite succeed, and, aithough he 💠 . won the amateur championship . # twice, he claims that he was #

SAM CRAWFORD IS THROUGH

Great Detroit Batter No Longer Fit For Regular Duty.

The opening stretch of this season has marked the passing of another grand old veteran of our national pastime. The horny hand of time, which gets them all in the long run. has finally grabbed off old Sam Crawford, the Walton burber,

Manager Hughey Jennings admits Crawford is through as a regular, though by no means through with the

"I am mighty sorry to have to admit that trawford is through as a regular," said Jennings recently. "He At St. Louis has undoubtedly played his last season. Chicago, as a regular outlieder. He has been St. Louis,

"Sam is not old in years. He is only thirty-six, just in the prince of his life. But he is nid as an athlete. He has served nearly as long a term in baseball as any active player in the game, I think only Lajole, Whaner and Plank have played longer than behas. I intend to use him from now on us a pinch hitter.

"It seems to be the opinion that I benched transford on account of his hitting. I want to say that is wrong, It is true Sam has not been bitting as well as in former years. He has hit somewhere around 250. But for that matter I might just as well bench Cobb. He has not struck his stride yet either. If Sam had the speed he would never have to quit playing the outfield for me. His hitting suits me, but I expect to get advantage of it now through pinch hitting."

The passing of Crawford as a reguhar breaks up one of the greatest outfield combinations in baseball. But for all of his greatness and value to his club he was never a star of the first water, and only because of the presence of Ty Cobb on the same club On any other club Crawford would have been the high light of his team and would probably have shared the limelight of buseball with Cobb instead of having to bask in the shadow of the great Georgian.

"If Sam had taken my advice," continued Jennings, "he would still be a regular: Two years ago I noticed that Sum was slowing up, and I wanted him to take up first base. We needed a man at that time, and I later got Burns. Sam had played first for us at times during our championship years.

"You would not notice that Sam was slow around first base. For that matter he is just as fast now as most first busemen. He can cover the ground and make the short jumps, but when it comes to getting over distance in the outfield the legs are no longer able to

New York's Large Motorboat Club. The combined fleet of motorboat clubs of New York city is about 1,000 boats of various descriptions.

BOTTLING AN EGG.

Easy Trick That Makes Plain Some Principles of Physics. If you place an egg on the ne k of

carefe almost any one would say that it is impossible to put the einto the carafe whole. Yet it can b done, and at the same time an important principle in air pressure can

First have the egg boiled hard and then peel it. Make a torch of folded paper, fight and pash it into the enrafe. After it has burned almost out place the egg on the needs of the carafe, small end downward, so that it acts as a stopper. But be sure you o not push it at all.

The heat of the burning paper has by this time driven much of the air out of the enrafe and heated what remains Inside. When it has finally burned out the carate will begin to cool, the air in it becomes cooler and The pressure of the atmospheric nir outside of the bottle is exerted upon the egg, which lengthens out gradual ly and at last drops late the carafe with a loud "plump."

In this way several important points in physics are made plain. First is seen how heat rarifies the air and when the air in the carafe cools erestes a partial vacuum. Then is proved the fact of atmospheric pressure by the way in which the egg acts. At est we see the egg forced in a the arafe, so that the air from without may fill the vacant spaces. - Ex-

As an addition to the Bertillion sysem of identification an Omaha denist has perfected a way to register the ridges of upper gums, which, he says never change and are different in every individual.
